- Junction Box
 - * One junction box for air and water inlet and outlet.

Hanging type instrument tray

ajax

Lamp

The luxury lamp has three levels with sensor switch, as well as another switch button on the control panel.

Foot control

The round plastic foot control on behind of the chair base cover is controlling the chair movement; and the foot panel made of stainless steel is controlling the handpieces and scaler.

Seamless soft upholstery

The movement of backrest and the seat is synchronized. This function will make the patient more comfortable.

The seamless soft upholstery is anatomically shaped, and is ideal for long-term treatment. The movement of seat and backrest is synchronized. This inhibits the "pulling on the patient's clothes effect".

Armrest

The right armrest is moveable. It enables the patients to sit or leave the dental chair easily.

Headrest

Articulated headrest with three different positions, convenient for treatment of children and handicapped. The control point is durable screw-type.

Assistant side

The assistant side is multi-direction. It's convenient for use.

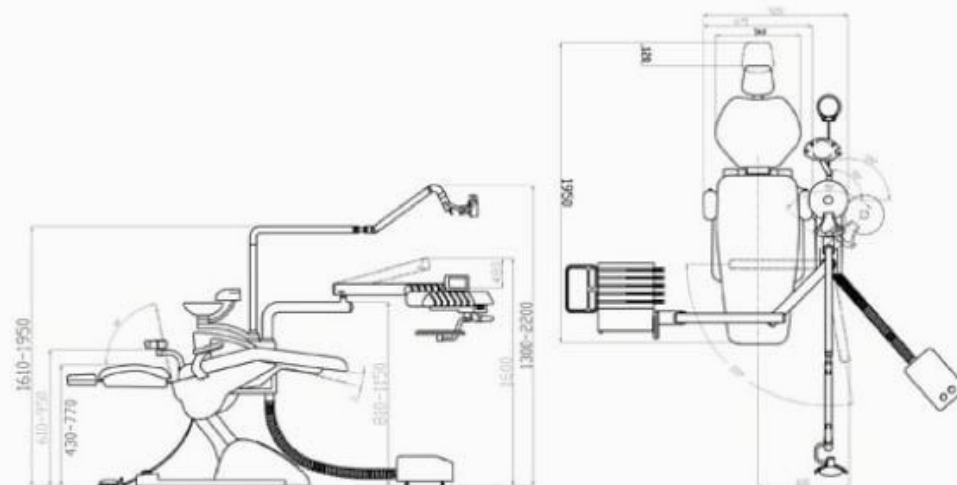

Instrument tray

Top-mounted and hanging types instrument trays are both in good design. They afford proper functions for the dentist.

Glass cuspidor

The glass cuspidor is moveable.

*Dimensions are quoted in millimetres.
